PLATE TECTONICS: Lecture 2. OCEAN RIDGE MAGMATISM . Magma production at the Earth's mid-ocean ridge system far exceeds that in any other tectonic environment, and this has been so since the early Precambrian. It is the dominant way in which internal heat is dissipated. The structure of a mid-ocean ridge is shown below:

PLATE TECTONICS: Lecture 2

1. Divergent plate boundaries: 2 plates are moving away from one another due to rising convection currents 2. Convergent plate boundary: 2 plates are moving towards each other due to sinking convection currents. 3. Transform plate boundary: 2 plates are sliding past one another

Plate Tectonic Notes. • Earth ' s Layers: • Crust. • Mantle. • Core. Crust (lithosphere) Plate Movement. The crust is broken into plates that move. – Lithosphere is divided into plates that slide around on top of the slowly moving mesosphere (tectonic plates) – It occurred after the break-up of Pangaea, and since then the continents have drifted apart.

Plate Tectonic Notes

The 2 plates crumple into one another and fold upwards into fold mountains. At these margins we get fold mountains (two continental plates collide) and earthquake activity, and a fantastic example of this is the Himalayan mountains. Here, the Indo-Australian plate is colliding with the Eurasian plate and has done so for millions of years.

Plate Tectonics - IGCSE REVISION – Notes with tips

Plate tectonics, theory dealing with the dynamics of Earth ' s outer shell—the lithosphere —that revolutionized Earth sciences by providing a uniform context for understanding mountain-building processes, volcanoes, and earthquakes as well as the evolution of Earth ' s surface and reconstructing its past continents and oceans.

7F: Chapter 2 - Plate Tectonics and Continental Drift Note

Plate tectonics (from the Late Latin: tectonicus, from the Ancient Greek: , lit. 'pertaining to building') is a scientific theory describing the large-scale motion of seven large plates and the movements of a larger number of smaller plates of Earth's lithosphere, since tectonic processes began on Earth between 3.3 and 3.5 billion years ago.

Plate tectonics - Wikipedia

ZIMSEC O Level Geography Notes: Plate Tectonics The lithosphere (that is the earth ' s crust and the rigid part of the mantle) is divided into seven large and several smaller plates. A plate is a rock that is found either below the oceans or continents making oceanic and continental plates respectively.
